

METEC quality policy is based upon the philosophy that ‘quality’ is the responsibility of all employees of the business and it is achieved by each employee performing effectively to meet the requirements of our customers and clients.

The scope of METEC ISO certification is defined as *“Design and manufacture of galvanic anode cathodic protection systems in zinc and aluminum alloys. Including management of installation and testing of these protection systems.”*

The management of METEC UK is committed to maintaining an effective and economical Business Management System in accordance to ISO 9001:2015 standards throughout the organisation to ensure that: -

- Products for customers meet the agreed specification and scheduled delivery requirements.
- Information generated by the day to day operation of the Business Management System can be collated and analysed to identify problems and enable action to promote continuing improvement throughout the organisation.
- Risks and opportunities are identified, and actions taken to address these.
- Business/Quality objectives and targets are set and monitored.
- A review of the Business Management System (BMS) will take place annually.

Furthermore, the policy is to ensure that recruitment and training, plant and equipment, and materials and services are available to provide the resources necessary to meet this commitment.

METEC leadership acknowledge and embrace that it is the responsibility of them and management to ensure that this policy and the requirements of the Integrated Management System (IMS) are understood, implemented and maintained by all employees and other interested parties.
